Text input

Thank Davide! You made the content much more interesting and comprehensive, I wish we had two hours each time

Really enjoyed the tutorials, though there were some areas where Davide was not 100% sure himself on the right answer (e.g. whether APE is biased in probit models with neglected heterogeneity)

Very quick feedback to problem set submissions. Good quality of supporting materials/notes from tutorials.

Davide was a fantastic TA who put in lots of effort to each tutorial. We were very fortunate to have him as our TA given that most of us often left the lectures more confused than when we went in. Davide's explanations made things much clearer
